

# Chapter 14 Loops and Arrays

Xin Miao

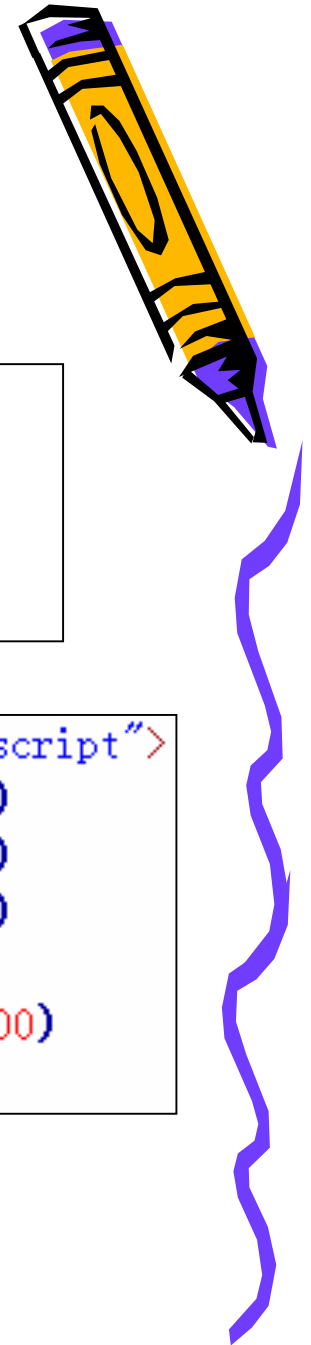

# Programming Loops

n Why and when to use a programming loop?

Three Types of Loops:  
n for,  
n while  
n do-while

```
<script type="text/javascript">  
alert("Printing... "+ 1)  
alert("Printing... "+ 2)  
alert("Printing... "+ 3)  
... ..  
alert("Printing... "+ 100)  
</script>
```

# Three Types of Loops (1)

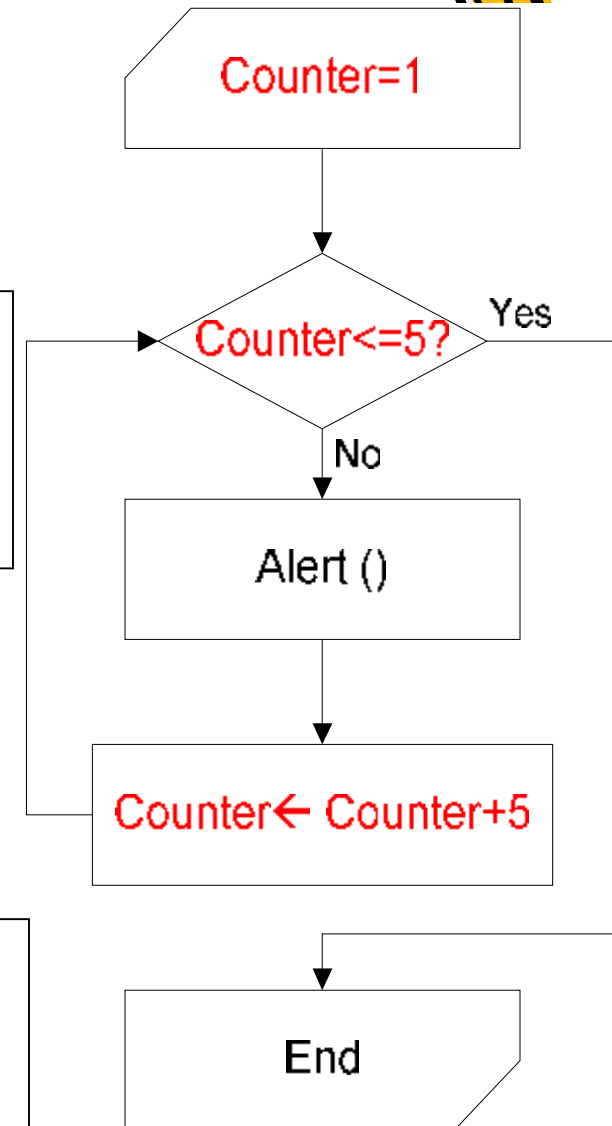

```
for (some number of times)
{ Execute a sequence of instructions }
```

```
var counter
for (counter=1; counter<=5; counter=counter+1)
{ alert ("I deserve an A+! ") }
```

3 Elements: **Starting number;**  
**ending number; increment**

```
var counter
for (counter=1; counter<=5; counter++)
{ alert ("I deserve an A+! ") }
```

# Three Types of Loops (2)

**while** (some condition is true)  
{ Execute a sequence of instructions}

```
// input a number from 1 to 10  
while (theNumber !=7)  
    { alert (" Enter a number! ") ...}  
alert ("You guessed it! It was 7.")
```

No **Starting condition** or  
**incrementing instruction.**

# “for” loops vs. “while” loops

```
var counter  
for (counter=1; counter<=5;  
counter=counter+1)  
{ alert (“I deserve an A+!”) }
```

```
var counter =0  
while (counter <=5)  
{ alert (“I deserve an A+!”)  
counter=counter+1  
}
```

# Three Types of Loops (3)

**do**

{ Execute a sequence of instructions }

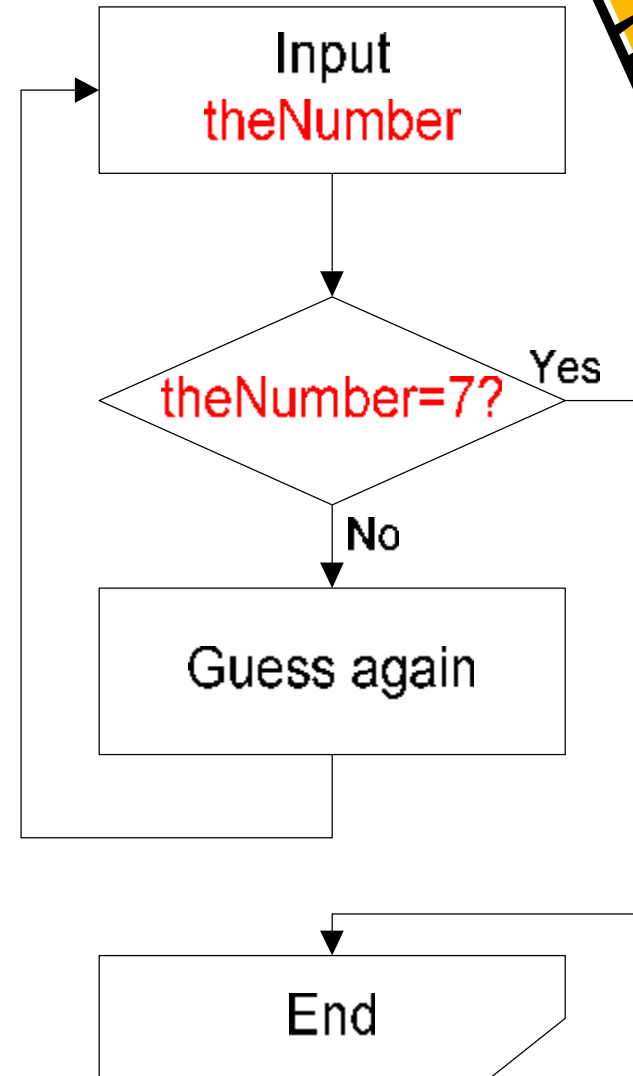

**while** (some condition is true)

**do**

{ alert (" Enter a number! ") ... }

**while** (theNumber !=7)

alert ("You guessed it! It was 7.")

# “while” loops vs. “do-while” loops

```
var counter =0  
while (counter <=5)  
{ alert (“I deserve an A+! ”)  
  counter=counter+1  
}
```

```
var counter =0  
do  
{ alert (“I deserve an A+! ”)  
  counter=counter+1  
} while (counter <=5)
```

# Creating Arrays

- `Var sampleArray= new Array(6)`

```
sampleArray[1]= "Hi"  
sampleArray[0]= 39.72  
sampleArray[2]= 25  
sampleArray[3]= true  
sampleArray[4]= "Bye"  
sampleArray[5]= false
```

- `Var sampleArray= new Array("Hi", 39.72, 25, true, "Bye", false)`

- `Var sampleArray= ["Hi", 39.72, 25, true, "Bye", false]`

|      |       |    |      |       |       |
|------|-------|----|------|-------|-------|
| "Hi" | 39.72 | 25 | true | "Bye" | false |
| 0    | 1     | 2  | 3    | 4     | 5     |

# Using Arrays with Loops

```
1 <html>
2 <head>
3   <title>Array and Loop Demo</title>
4 </head>
5 <body>
6   <script type="text/javascript">
7     var sampleArray= new Array("Hi", 39.72, 25, true, "Bye", false)
8     alert("the element 0 is: "+sampleArray[0])
9     alert("the element 1 is: "+sampleArray[1])
10    alert("the element 2 is: "+sampleArray[2])
11    alert("the element 3 is: "+sampleArray[3])
12    alert("the element 4 is: "+sampleArray[4])
13    alert("the element 5 is: "+sampleArray[5])
14    //using arrays with loops
15    for (counter=0; counter<=5; counter++) {
16      alert ("the element "+counter+ " is: " +sampleArray[counter])
17    }
18  </script>
19 </body>
20 </html>
```

# Using elements Array

Please enter four names in the boxes below:

|        |       |
|--------|-------|
| Ryan   | Larry |
| Linnea | Lori  |

Please enter four short greetings below:

|       |                 |
|-------|-----------------|
| Hi    | How are you     |
| Hello | Good to see you |

# Summary

- Three types of loops: for, while, do-while;
- Create and use "arrays";
- Refer to form elements by number instead of by name (element arrays)

# Lab Exercises for Ch14

- Lab Ex. **14.1, 14.2, 14.3 & 14.4**  
(P.422-423)
- 14.1-part4 & 14.3-part3 are optional.
